SWETANK KUMAR

Product Owner | Agile Delivery · Requirements · Technical Background in Full-Stack Development

Ranchi, Jharkhand, India | +91 90973 13051 | swetanks66@gmail.com | LinkedIn: | GitHub

PROFESSIONAL SUMMARY

Technically grounded Product Owner candidate with nearly 2 years inside an Agile delivery team at Cognizant, turning undocumented legacy business rules into clear requirements and working software for an enterprise client. Owned three warehouse workflows from analysis to acceptance, defining parity criteria and resolving gaps with stakeholders and developers. Has taken three products from idea to working release, including two Generative AI tools, and led operations and technical teams for a newly launched rural college. Speaks both business and engineering, so priorities turn into buildable, testable stories.

CORE SKILLS

- **Product:** Backlog ownership and prioritization, user stories and acceptance criteria, requirements and gap analysis, MVP scoping, user-flow design, functional parity validation, user acceptance testing
- **Agile and Delivery:** Scrum ceremonies, sprint reviews, cross-functional collaboration, delivery to client timelines
- **Stakeholders:** Client and stakeholder communication, team leadership and delegation, event and program planning
- **Technical Fluency:** REST APIs, MERN stack (MongoDB, Express.js, React, Node.js), Generative AI API integration, Jest, Git, Postman

PROFESSIONAL EXPERIENCE

Campus Administrator (Volunteer) | Rural College Initiative Nov 2023 – Present

- Partnered with the founding team to establish and launch a rural college; own day-to-day campus operations and administration.
- Lead the technical heads (website, attendance systems): set priorities, delegate responsibilities and track execution across academic and operational functions.
- Plan and run educational events, doubt-clearing sessions and training and motivation programs for students and faculty.
- Balance competing demands from founders, faculty and students while preparing for the Civil Services (UPSC) examination.

Programmer Analyst Trainee | Cognizant Aug 2022 – Nov 2023

- Analyzed legacy Visual FoxPro business logic for a billable client and translated it into clear, testable requirements and services for a React Native warehouse-management application.
- Owned three core workflows end to end (RF running and put-away, outbound staging, inventory location changes), defining functional-parity criteria and validating each against legacy behavior.
- Acted as the link between client stakeholders and front-end developers to resolve behavior discrepancies, keeping releases on client timelines.
- Turned business rules into Jest unit tests that served as executable acceptance criteria and reduced regression risk.
- Worked in Agile sprints with code reviews and Git-based change control.

MERN Developer Intern | Cognizant Jan 2022 – Aug 2022

- Delivered a Traffic Challan Management System in a 10-member team, letting users look up vehicle details, challan status and payment status.
- Presented the product's architecture and workflow to the engineering team and was converted to full-time employment.

PRODUCTS BUILT

AI Resume Builder | Generative AI, MERN

- Identified the job-seeker problem (writing strong resume content), scoped an MVP and designed a guided flow from raw input to a polished resume with live preview, user accounts and secure data storage.

AI Skill Analyzer and Resume Recommender | Generative AI, MERN

- Defined the value proposition (close skill gaps to improve employability), shipped trend-based skill recommendations, then grew scope with resume-building and interview-preparation features.

Airbnb Clone | MERN

- Modelled a two-sided marketplace with distinct host and guest roles, listings, search and bookings.

EDUCATION

Master of Computer Applications (MCA) | ITER2020 – 2022
