SWETANK KUMAR

Software Developer | JavaScript · Node.js · React · REST APIs

Ranchi, Jharkhand, India | +91 90973 13051 | swetanks66@gmail.com | LinkedIn: | GitHub

PROFESSIONAL SUMMARY

Software Developer with nearly 2 years at Cognizant building and testing backend services for an enterprise legacy-modernization program. Re-engineered Visual FoxPro business logic into modular Node.js services consumed by a React Native client, and wrote Jest unit tests that protected functional parity during migration. Since then, designed and shipped three full-stack applications, including two powered by Generative AI APIs. Strong in JavaScript data structures and algorithms, REST API design and MongoDB data modelling.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), HTML5, CSS3
- **Backend:** Node.js, Express.js, RESTful API design, JWT authentication and authorization, middleware, request validation, error handling
- **Frontend:** React (hooks, component architecture, state management), React Native, Tailwind CSS, Bootstrap
- **Database:** MongoDB (schema design, indexing, CRUD, multi-criteria queries)
- **Testing and Tools:** Jest, Git, GitHub, Postman
- **Practices:** Data structures and algorithms, MVC, modular design, unit testing, code review, Agile, legacy migration, Generative AI API integration

PROFESSIONAL EXPERIENCE

Independent Full Stack Developer | Self-directed Nov 2023 – Present

- Designed and shipped three full-stack MERN applications, two integrating Generative AI APIs (see Projects), owning architecture, REST APIs, data models and UI end to end.

Campus Administrator (Volunteer) | Rural College Initiative Nov 2023 – Present

- Helped the founding team launch a rural college; lead its technical heads (website, attendance systems) and run day-to-day operations, in parallel with Civil Services (UPSC) preparation.

Programmer Analyst Trainee (Backend Engineer) | Cognizant Aug 2022 – Nov 2023

- Re-engineered legacy Visual FoxPro business logic into modular, maintainable Node.js services for a billable client's warehouse-management system, migrated to a React Native application.
- Owned the migration of three core warehouse workflows (RF running and put-away, outbound staging, inventory location changes) with full functional parity to the legacy system.
- Designed and integrated REST APIs linking the React Native front end to backend services, supporting multiple input and output formats across modules.
- Authored Jest unit tests for migrated business rules, catching regressions before release and raising confidence in each delivery.
- Debugged side by side against legacy behavior with front-end developers and client stakeholders; used Git branching and code reviews in Agile sprints to deliver on client timelines.

MERN Developer Intern | CognizantJan 2022 – Aug 2022

- Selected through on-campus placement; completed a 6-month structured MERN program, shipping a hands-on project at each layer of the stack.
- Co-built a Traffic Challan Management System in a 10-member team (React UI, Express.js REST APIs, MongoDB queries optimized for multi-input lookup); converted to full-time after defending its architecture in a technical interview.

PROJECTS

AI Resume Builder | MongoDB, Express.js, React, Node.js, Generative AI API

- Generates and refines resume content from user input via a Generative AI API; Express.js APIs orchestrate AI requests and MongoDB persistence behind React forms with live preview and authenticated, secure user data.

AI Skill Analyzer and Resume Recommender | MERN, Generative AI API

- Built resume-parsing and trend-comparison logic that flags skill gaps against current industry technologies; extended it with resume-building and interview-preparation modules.

Airbnb Clone | MERN, Tailwind CSS

- Built a booking platform with listings, search, bookings and role-based access for hosts and guests; designed MongoDB schemas and REST APIs for users, listings and bookings.

EDUCATION

Master of Computer Applications (MCA) | ITER 2020 – 2022
